1. 产品概述(Product Overview)

电池主动均衡器是为大容量串联电池组量身打造的均衡管理系统。均衡器以超级电容为媒介，实现主动式能量转移均衡。

Battery Active-Balancer is a balanced management system tailored for large-capacity series battery packs. The Balancer USES ultracapacitors as the medium to balance the active energy transfer.

均衡器适用于 2~24 串的电池组，具备电压采集和均衡功能。均衡器工作时以持续 15A 的均衡电流进行能量转移，均衡电流不依赖电池组中串联 电池单体的压差。单体电压采集范围 1 V~5V，精度 $\pm 3\text{mV}$ 。可适用于磷酸铁锂、三元锂、钛酸、铅酸等市面上的所有电池种类。

The Balancer is suitable for 2 ~ 24 series battery packs, with the functions of voltage collection and balance. The balancer operates with a constant balance-current of 15A for energy transfer. The balance-current does not depend on the delta-voltage of the battery cells in series. Cell voltage acquisition range 1 V ~ 5V, accuracy $\pm 3\text{mV}$. Applicable to Li-ion, Lipo, Lifepo4, LTO and other battery on the market.

均衡器具备蓝牙通信功能，并配套手机 APP 软件。可以通过手机蓝牙连接均衡器以查看电池单体电压、均衡状态、修改参数等操作。均衡器体积小、易携带，可广泛应用于小型观光车、代步车、共享汽车、大功率储能、基站备用电源、太阳能电站等产品的电池 PACK 内，亦可用于电池均衡维修、修复等场合。

The balancer is equipped with bluetooth communication function and supports mobile APP software. The balancer can be connected to the phone via bluetooth to check the individual battery voltage, balance state, modify parameters and other operations. The balancer is small in size and easy to carry. It can be widely used in the battery PACK of small sightseeing car, scooter, sharing car, high-power energy storage, base station backup power supply, solar power station and other products. It can also be used in battery balance maintenance, repair and other occasions.

3. 功能介绍及使用说明(Function introduction and usage instructions)

3.1. 主动均衡(Active equalization)

主动均衡器采用主动均衡技术，均衡的原理是将高电压的电芯能量转移到低电压的电芯中，通过主动均衡器这一媒介实现能量转移。用户在使用均衡功能之前需要设置电池基本参数，需要下载极空BMS-APP，下载之后在极空APP中参数设置页面设置电池类型，默认参数见第四章。设置完成电池类型后在常用设置中设置电池基本参数，包括单体数量、电池容量、触发均衡压差(可保持默认)、电压校准、电流校准等。

用户可在APP的参数设置中自行设置均衡触发压差(mV)，均衡打开时，当电池包中任意两串电池压差大于设定值时均衡自动打开，压差小于设置值后关闭。默认均衡电流为最大值15A，用户可根据自己电池容量来调整，建议均衡电流不超过电池容量(C)的0.2C。如无需均衡功能，可在APP的BMS控制页中将均衡开关设置为关闭状态。

The active equalizer adopts active equalization technology, and the principle of equalization is to transfer the energy of the high-voltage cell to the low-voltage cell, and realize the energy transfer through the medium of the active equalizer. Before using the balancing function, users need to set the basic parameters of the battery and download the Jikong BMS-APP. After downloading, set the battery type on the parameter setting page of the Jikong APP. For default parameters, see Chapter 4. After setting the battery type, set basic battery parameters in common Settings, including the number of cells, battery capacity, trigger equalization differential pressure (the default value can be retained), voltage calibration, and current calibration.

Users can set the balance trigger pressure difference (mV) in the parameter setting of the APP. When the balance is turned on, the balance will be turned on automatically when the pressure difference of any two strings of batteries in the battery pack is greater than the set value, and the balance will be turned off when the pressure difference is less than the set value. The default balance current is 15A. Users can adjust the balance current according to their own battery capacity. It is recommended that the balance current not exceed 0.2C of the battery capacity (C). If you do not need the balancing function, you can set the balancing switch to off in the BMS control page of the APP.

3.2. 通信功能(communication function)

主动均衡器支持选配CAN/RS485功能，用户可以根据自身需求来进行选配，同时在极空APP的BMS控制页的复用端口切换选择CAN或者RS485，在使用主动均衡器的通信功能时用户可以根据自身的使用需求以及场景自行设置主动均衡器的地址以及通信协议，具体通信协议见极空主动均衡器通信协议文档。

The active equalizer supports the optional CAN/RS485 function, which can be selected according to your own requirements. At the same time, you can select CAN or RS485 for switching multiplexed ports on the BMS control page of the Jikong APP. When using the communication function of the active equalizer, you can set the address and communication protocol of the active equalizer according to your own requirements and scenarios. For specific communication protocols, see the communication protocol document of the Jikong active equalizer.

6.1. 单个均衡器安装(Single Equalizer Installation)

单个JK-B15A24S型均衡器适用于2-24串电池串联的电池组。但当电池组电压低于9V时，均衡器需提供外部直流9V~100V电源。

对于24串电池串联的电池组，安装接线方法如下图所示。

A single JK-B15A24S equalizer is suitable for battery packs with 2-24 series batteries connected in series. But when the voltage of the battery pack is below 9V, the equalizer needs to provide an external DC power supply of 9V~100V.

For a battery pack with 24 series of batteries connected in series, the installation and wiring method is shown in the following figure.

7.2. 设备激活(Device activation)

打开电源使用之前，请再次确认均衡线连接是否正常，给均衡器提供的电源是否在要求范围之内，检查均衡器是否已经稳妥的放置，确认无误后才可以接通均衡器电源，否则可能造成工作异常、甚至烧毁等严重后果。

确认上述操作无误以后，可以给均衡器上电。JK-B15A24S型均衡器有上电控制开关，当开关按下时均衡器开机同时指示灯常亮，再次按下开关使开关断开后均衡器关机，同时指示灯熄灭。

Before powering on the power supply, check whether the balance cable is properly connected, whether the power supply for the equalizer is within the required range, and whether the equalizer is properly placed before powering on the equalizer. Otherwise, serious consequences such as abnormal working or even burning may occur.

After confirming the preceding operations, power on the equalizer. Type JK-B15A24S equalizer has a power-on control switch. When the switch is pressed, the equalizer is turned on and the indicator is steady on. After the switch is turned off, the equalizer is turned off and the indicator is turned off.
